

Lê Anh Lương

.NET BACKEND DEVELOPER

Hà Nội, Vietnam · +84 976 564 969 · leanhluong0110@gmail.com
github.com/leanhluong · linkedin.com/in/anh-luong-le

SUMMARY

Backend developer with ~2–3 years of experience building **production .NET microservices** for a multi-tenant SaaS platform (12+ services). Strong in **C# / ASP.NET Core** with Clean Architecture, CQRS and DDD; comfortable across **PostgreSQL, Redis, RabbitMQ/MassTransit, gRPC and SignalR**. Have shipped features across **commerce (Sales, CRM), fintech (online payment, e-invoice & e-contract), communications, marketing and platform security** — part of **re-platforming a legacy PHP monolith into .NET** — including third-party integrations with **VNPay, BKAV, Viettel and Brevo**.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL

Backend / .NET: ASP.NET Core Web API, EF Core, Clean Architecture, CQRS + pipeline behaviors, DDD, Result pattern, gRPC, SignalR

Data: PostgreSQL 16 (Row-Level Security, JSONB, pgvector), Redis 7, EF Core; multi-tenant isolation

Messaging / Async: RabbitMQ, MassTransit, Hangfire

Security: JWT (RS256 / JWKS), OAuth2 / OIDC, Argon2id, AES-256-GCM, 2FA (TOTP), CSRF, rate limiting, RBAC, API keys

Infra / DevOps: Docker, YARP API Gateway, Serilog, OpenTelemetry, GitHub Packages (NuGet), CI/CD, Git

Testing: xUnit, NSubstitute, FluentAssertions, Testcontainers

Domains: e-commerce / Sales, CRM, online payment, e-invoice & e-contract, marketing & notification, HRM / Gym, real-time chat, legacy PHP→.NET migration

Integrations: VNPay / VNPayQR / VietQR, BKAV & Viettel (e-invoice / e-contract), Brevo (email/SMS), Zalo ZNS, Facebook & Zalo (incl. ZCA personal), Hikvision (ISAPI), FreePBX / Asterisk, OpenAI

Frontend (working): ReactJS, Next.js, Tailwind CSS

PROFESSIONAL EXPERIENCE

NextX — .NET Backend Developer

2024 – Present · Hà Nội

Part of re-platforming a legacy PHP monolith into 12+ .NET microservices (Clean Architecture, shared-kernel NuGet, PostgreSQL, RabbitMQ, YARP gateway, gRPC).

Communication service (omni-channel chat) — primary owner

- Built an omni-channel inbox unifying **Facebook Messenger, Zalo OA, Zalo Personal (a ZCA / zca-js Node bridge) and a web chat widget** (100+ API endpoints), real-time over **SignalR**.
- Implemented an **AI chatbot** (**pgvector** + GPT RAG); integrated chat with **CRM and Sales over gRPC** (contact sync, product catalog).
- Designed **smooth weighted round-robin** routing; webhooks via fast 200-OK + **async Hangfire**; channel credentials encrypted with **AES-256-GCM**.

Commerce — Sales & CRM

- Built parts of the **Sales** service (133 endpoints): orders, products/goods, inventory, **pricing & promotions**, commission, cash book and **reports**.
- Contributed to the **CRM** service: Lead, Contact, Opportunity, Quotation and analytics (~90 endpoints, gRPC-exposed).

Fintech — Payment, E-Invoice & E-Contract

- Built the **Payment** service for online payment via **VNPay, VNPayQR and VietQR** (QR generation, IPN callback handling, reconciliation).
- Built the **E-Invoice** and **E-Contract** servers integrated with Vietnam providers **BKAV and Viettel**.

Marketing & Notification

- Built a bulk-campaign engine across **Email/SMS (Brevo) and Zalo ZNS** — Brevo API client (sender verification, DKIM/SPF), **MassTransit** workflows, **Hangfire** batch sending, **MJML** rendering.
- Built the **Notification** service (multi-channel notifications, exposed over gRPC).

Platform security — IAM & API Gateway

- Built the **YARP API Gateway** (12-step pipeline: header-spoofing guard, JWT / API-key auth, **CSRF double-submit, Redis sliding-window rate limiting**) and contributed to **IAM** (**JWT RS256 + JWKS, Argon2id, 2FA TOTP, RBAC** — 80+ endpoints).
- Enforced **multi-tenant isolation** via PostgreSQL **Row-Level Security** + EF Core global query filters.

Gym / HRM, devices & legacy migration

- Delivered **HRM, Gym and golf/club-management** services (membership/subscription, booking & session deduction); integrated **Hikvision** devices (card + Face ID) via **ISAPI** + an **Electron agent over SignalR**.
- Migrated and maintained **Gym and CRM modules from the legacy PHP system**, including **telephony / call integration (FreePBX + Asterisk)**.
- *Practices*: PR-based workflow, unit & integration tests (xUnit + Testcontainers), RFC 7807 error contracts, structured logging and distributed tracing.

FPT Software — .NET Developer Intern

May 2023 – Sep 2023 · Hà Nội

- Trained in .NET web development; built features and practiced Agile workflow, Git, debugging and coding standards.

EDUCATION

FPT University (Hòa Lạc) — B.E. in Software Engineering

Graduated 2025

Specialization: .NET Development

SELECTED PERSONAL PROJECTS

- **AA Catering Management System** — graduation project; enterprise catering management. Next.js + ASP.NET Core, SignalR, Excel export, SQL Server, Docker.
- **FinTrack** — stock portfolio tracker. ReactJS + ASP.NET Core Web API, EF Core, JWT.
- **ShopBakery** — e-commerce site with **VNPay** payment. ASP.NET Core Razor Pages, EF Core.
